

Conceptual Map Template

	Questions	Energy	Water	Waste	Other major environmental impacts
Raw Materials	Where do we get the materials from? What was that material doing or being used for before it was extracted? What are the impacts of its extraction?				
Manufacturing	What are the material, energy, and water inputs required to make the raw materials and the final product? What waste is created during the manufacturing processes?				
Packaging & Transportation	What are the materials used for packaging and how are they made? How are the materials and product transported at different phases of the life cycle?				
Use	What inputs are required to use the product (e.g. energy, water, materials) and what waste is created?				
End of Life	How is the product disposed (landfill, litter, recycled or incinerated?) How much energy and water are used for disposal or reuse?
